ABSTRACT

Drug prescribing is the most essential practice of medical professionals. For healthy life style, not only the prevention of disease is important but equally important is the treatment of such disease with safe drugs. Every drug has some side effects if the dose of drug is correct then it can be avoided. Some drugs side/adverse effects can be reduced by another drug. Hence doctor's prescription is safer than self-medication. Banned drugs have more Adverse/side effects. The drugs which are found unsafe in post marketing surveillance are banned by regulatory authorities. DCGI (Drug Controller General of India) is the highest authority in India to expand the approval of any drug or ban a drug. Banned drugs still available in developing countries like India due to lack of Law enforcement, physician awareness and drug control authorizes fails to inform all hospitals of the status of medicine. India is a major hub of Banned drugs. Many of the banned drugs are available as over the counter drugs and people consume them unaware and cause damage to one self. The pharmacist should take interest in public information campaigns and educate consumers and thus play an important role of eliminating the banned drugs from market.

INTRODUCTION

Banned drugs are those drugs which are not allowed to intake because they cause various adverse effects more than the therapeutic effects.¹ Generally Drug is the chemical or synthetic substance used for diagnosis, treatment, mitigation and prevention of disease and also used to enhance physical and mental well-being.² A drug is usually prescribed to patient for its positive effects but may give rise to the several adverse effects.³ Every type of new drug precise introduced in to the market after several pre-clinical and clinical trials studies and then getting approval by NDA and FDA.⁴ During these different phases the efficacy as well as safety profiles of the drug are tested. But yet some adverse effects of the drug appear after their usage in the general population.⁵ Adverse drug reaction is described as 'A response to a drug which is noxious and unintended, and which occurs at dose normally used for prophylaxis of physiological function'.² Some may cause adverse effects only when combined with particular drugs. The adverse effects are detected through a process of regular monitoring after the drug is released called pharmacovigilance. DCGI (Drug controller general of India)

is the highest authority in India to expand the approval of any drug or to ban a drug. If the drug is ineffective, the country may ban the drug or company may itself withdraw.³

Regulation and Guidelines

Process of banning drug in India is done by DTAB an executive committee examines the harmful side effects of drugs and reports the results to DTAB. The drugs which are found to have harmful side effects then the government issues the ban order and all manufacturers and wholesalers are asked not to sell that particular drug. The DCGI notifies all state drugs and drug authorities, pharmacist association and manufacture about the ban of the drug and authorities are instructed to carry out the inspections. The license of pharmacist stocking banned drugs can be revoked under Drugs and Cosmetic Act.⁶

Reasons For Banning Drug

A drug is introduced into the market for benefit of consumers. The main aim is to ensure good quality of life to patients but every drug comes with its own adverse effects. Before egrouse test passing in manufacturer's development then after a serious of quality control process only a drug

can be released into the market.² A drug may show toxicity only after it is introduced in the market and not at the time of clinical trials.⁸ These causes several adverse effects after drug introduced in to market called pharmacovigilance. Unexpected adverse effects, excess toxicity, availability of safer alternatives, harmful interactions, irrational use and failure of risk management options are the prime reasons which direct whether to use, cautiously use or ban a drug.⁷ If any harmful side effects are detected the government issue the ban order and all the manufacturer and wholesaler are asked not to stock the particular medicine.³

Why India Still Selling Banned Drugs

India has become dumping ground for banned drugs. The irony is that very few people know about the banned drugs and consume them unaware which leads to several side effects to them.⁶ These may lead to organ damages like kidney, liver damages etc. Though each country has its own list of banned drugs, it worrisome that some drugs that are banned in other countries for proven adverse effects are

still available in Indian market.(3)Most of the analgesic, anti-diarrheal and cough preparations which are banned in other countries are blindly used in India as over the counter drugs. ⁴ This is due to lack of awareness of physicians, patients, poverty, self-medication, high cost and communication gap between DCGI and state drug controller. ² Health Ministry of India finalized that if any drug banned by two or more countries and it is still being marketed in India, they may possibly remove the drug from the Indian market after proper examination or appropriate action will be taken. ¹

Awareness about Banned Drugs

Drugs become an integral part of medical practice. ⁸ Due to harmful adverse effects of the drugs many of them are banned by government. But banned drugs are still available and People consume them unaware, these long term use of such medicines can put negative impact on human health in various ways by damage liver, kidney or any organ.¹ These can be minimized by conducting the awareness programs by government hospitals as well as for private medical practitioners to make aware of the current status of drugs in market. Informing the public about the internationally banned drugs and health hazards. These can be achieved by opening of drug information centers to provide updated and unbiased information about the drugs to the prescribers and patients. Sensitization of medical students about the banned and controversial drugs so as to refrain the use of such drugs by them in future. ⁹ The pharmacist should take interest in public information campaigns and educate consumers. And to stop the use of banned drugs, what is needed is the cumulative efforts by doctors, pharmacists, researchers and manufactures along with the involvement of strict and vigilant regulatory authorities. ²

CONCLUSION

Drugs are designed to be life savers. Due to reporting of harmful adverse effects some drugs are banned. A ban is needed to protect the public's health and quality of health care. Most of the drugs are banned in other countries for

proven adverse effects but still available in India. These are due to lack of awareness and used the banned drugs as over the counter drugs and causes severe harm to their health. There for it becomes important for the government to implement strict laws, on manufacturers, wholesalers and retailers. And government should be ordered to dump these cheap drugs in proper manner and also there should be creating awareness amongst physician, health professionals and general public about the ADR of these drugs and thus play an important role of eliminating the banned drugs from market.
