ABSTRACT
2, 4-diaryloxy-6-methylpyrimidines underwent Chapman rearrangement under conventional heating as well as on microwave irradiation to afford corresponding 1, 3-disubstituted-(1H, 3H)-6-methylpyrimidine-2, 4-diones.

Keywords: 2,4-diaryloxy-6-methylpyrimidines, 1,3-disubstituted-6-methylpyrimidine-2,4-diones, Chapman rearrangement, Imidates, Microwave irradiation.

INTRODUCTION
Pyrimidines are biologically important molecules and valuable heterocyclic nuclei for the design of pharmaceutical agents.1-2 2, 4-(1H, 3H)-pyrimidinedione was used to synthesize antibacterial3 and antitumor agents.4 Some of the derivatives of 2, 4-(1H, 3H)-pyrimidinedione exhibit significant pharmacological activity and have been used as antitumor, antibacterial, and antiviral drugs.5

The most prominent representatives are 5-fluoro-1H, 3H-pyrimidine-2, 4-dione and 5-Methyl-(1H, 3H)-pyrimidine-2, 4-dione derivatives.6,7 Uramustine, 5-{N, N'-bis (2'-chloroethyl) amino} pyrimidine-2, 4-dione, is used orally in the treatment of several leukemias8 and 5-nitro-(1H, 3H)-pyrimidine-2, 4-dione derivatives exhibit macrophage growth inhibition.9 1-Aryl-5-substituted pyrimidine-2, 4-diones are also useful intermediate in the synthesis of other 2, 4-(1H, 3H)-pyrimidinedione derivatives.10-12 Some pyrimidinedione derivatives are used for treating or preventing metabolic disorders, dyslipidemia, neurological disorders, hematological diseases, cancer, inflammation, respiratory diseases, gastroenterological diseases, diabetic complications, obesity-related disorders and non-alcoholic fatty liver diseases.13

Many pyrimidinedione derivatives are used in agrochemicals as pesticides, antiphotosynthetic herbicides; since they contain an active ingredient and exhibit preventing and controlling effects against harmful living things, especially agricultural pests, sanitary insect pests, stored product insect pests, house insect pests etc.14-16

1-Aryl pyrimidine-2, 4-diones have been synthesized from substituted ureidopropanoic acids or 1-acryloyl-3-arylureas.17 6-methyl-1, 3-oxazine-2, 4-(3H)-dione when treated with an excess of arylamines was transformed into the appropriate 1-aryl-6-methyl pyrimidine-2, 4-diones.18 Pyrimidine-2, 4-dione derivatives, in reactions with diarylidonium salts, gave the appropriate N-mono- and N, N'-diarylation products with high regioselectivity.19, 20

Attempts at direct N-arylation of 2, 4-(1H, 3H)-pyrimidinedione derivatives have also been reported.19,21 All these methods are tedious and involve substrates that are not easily accessible.

MATERIALS AND METHODS
The melting points were determined using capillary tube and are uncorrected. The FTIR spectra were recorded on Spectrum One Perkin Elmer (US). The 1H-NMR spectra were recorded on a Bruker AVANCE (300 MHz) spectrometer (with TMS as internal references). 13C-NMR spectra were recorded on Bruker AVANCE (75 MHz) spectrometer. Mass spectra were recorded on API-3000MD-series (US). UV spectra were recorded on Shimadzu 2401 PC and Shimadzu 2450, Japan, Spectrophotometer. Elemental analyses were carried out in EA 3000, EuroVector, Italy. The purity of the compounds was checked by TLC on pre-coated SiO2; gel (200mesh). Modified LG microwave laboratory oven was used for microwave irradiation. The solvents were purified by distillation before use.

RESULTS AND DISCUSSION
In view of the biological importance of pyrimidinediones, we were interested to prepare them from readily available chemicals. Herein, we wish to report the synthesis of 1, 3-diaryl-2, 4-(1H, 3H)-6-methylpyrimidine diones via Chapman rearrangement of 2, 4-diaryloxy-6-methyl pyrimidines.

The thermal conversion of aryl N-arylbenzimidates to N-aryldiphenylamines is known as the Chapman rearrangement.22 Though imidates of many classes of compounds have been subjected to Chapman rearrangement, 2, 4-diaryloxy-6-methylpyrimidines have not been investigated.

188
In light of the observations from literature survey as well as our interest in evolving new, simpler, ecofriendly, convenient methodologies in organic synthesis and absence of reports on the Chapman rearrangement of 2, 4-diaryloxy-6-methylpyrimidines led us to undertake the present work.

For this purpose, 6-methyl-1H, 3H]-pyrimidine-2, 4-dione was visualized as the starting substrate. This on chlorination followed by condensation with various phenols yielded the respective aryloxy products. These were then subjected to Chapman rearrangement to afford the corresponding 1, 3-diaryloxy-6-methylpyrimidine-2, 4-diones. (Scheme)

2. 4-dichloro-6-methylpyrimidine (1) has been synthesized as per literature procedure.23

General Procedure for preparation of 2, 4-diaryloxy-6-methylpyrimidine (3a-3j)

A mixture of 2, 4-dichloro-6-methylpyrimidine (1) (0.02M), different phenols (2a-2j) and sodium sulphate. Recovery of ether followed by purification afforded solid/ oil.

2, 4-di (2-methylphenoxy)-6-methylpyrimidine (3a)

Yield: 58%. m.p.: 106°C. IR (KBr, cm\(^{-1}\)): 1240 (C-O-C stretch.), 1345 (C-N stretch.), 1609 (C=C stretch,Ar). 1\(^{\text{H}}\) NMR (300 MHz, CDCl\(_3\)): \(\delta\) 2.2 (s, 9H), 6.3-7.0 (m, 9H). 13\(^{\text{C}}\) NMR (75 MHz, CDCl\(_3\)): \(\delta\) 12.31, 16.12, 115.32, 119.91, 124.14, 126.98, 132.09, 132.13, 152.19, 155.78, 156.91, 158.92. **CONCLUSION**

2, 4-diaryl-6-methylpyrimidines for the first time underwent facile Chapman rearrangement to afford the corresponding 1, 3-disubstituted-6-methylpyrimidine-2, 4-diones under conventional heating as well as microwave irradiation.

Microwave assisted method of synthesis provides a simpler and environmental-friendly alternative for the conventional procedures.

The synthesis of novel heterocycles reported in this paper has the potential of exhibiting agrochemical and pharmacological activities.
